

## Scaffolding Inspections

We have recently updated our [Work at Height Standard \(SH STD 03\)](#) to include minimum requirements for the competence and independence of those inspecting scaffolds.

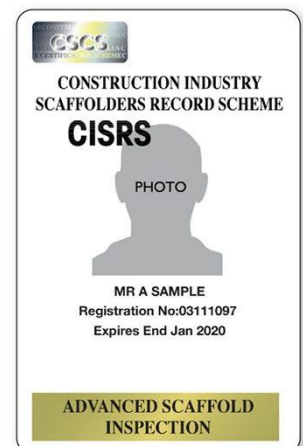

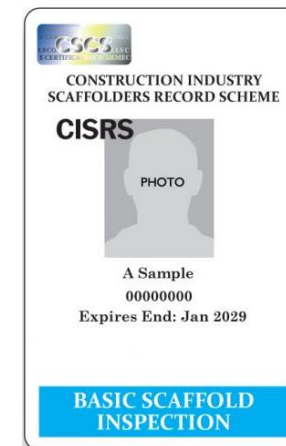

Historically scaffold inspections have largely been undertaken by our scaffold contractors, and whilst this remains a suitable way for inspecting certain types of scaffold, for those that present a higher risk it's important that the scaffold inspector is independent from the scaffolding contractor.

At preconstruction stage, each project will be required to undertake an assessment of the risk level of their scaffold(s), and ensure allowance is made to apply the minimum competence and independence of inspectors based on the level of risk laid out within table 1 of the [Work at Height Standard \(SH STD 03\)](#).

Section 3.32 of the [Construction Phase Health and Safety Plan](#) has also been updated with a table to record the agreed inspection arrangements.

All current projects should undertake a review of their current scaffold inspection arrangements and where appropriate, implement any additional inspections.

All projects commencing after **1<sup>st</sup> January 2026** must comply with the new requirements for scaffold inspection as laid out in the standard.
