

Compact Plant – Wheeled Dumper

A number of incidents have been recorded within our business resulting in the overturning of small dumpers. Fortunately these incidents have not resulting in operator injury however we consider the incidents as very serious. Following a review of these incidents the business has concluded that use of wheeled dumpers below 2t in capacity is prohibited.

Actions for all projects and contractors using dumpers:

- Wheeled Dumpers with a capacity of less than **2t** are not permitted to be used on Morgan Sindall Construction Projects.
- Any Wheeled Dumpers (below 2t) being used currently to be taken out of service immediately and alternative material logistics considered.
- This includes those which have been formally considered under the 'Compact Plant Standard' and been authorised by your Local Director.
- RAMS for material movement around your projects should be reviewed to allow for potential change in equipment selection.

Further communications with our supply chain and changes to CASSE will follow
